Summary

A motivated Computer Science graduate specializing in Multimedia Computing, combining strong technical implementation skills with data-driven problem solving. Proven experience in database structures, machine learning classifications, and full-stack application development. Highly adaptable fast learner with a solid grasp of SQL database management, object-oriented programming, and Agile methodologies.

Working Experience

- **Digital Marketing Intern, Speed Auto Parts & Accessories, Puchong, Selangor, September 2025 – December 2025. (3 months)**
 - Created engaging promotional and educational content for company's social media using Canva and CapCut.
 - Created a product catalogue for company's profile using Canva.
 - Gained practical exposure to corporate data workflows by managing and auditing a digital catalog database of 200+ product SKUs via Wix.
 - Learned and operated the SiteGiant e-commerce system to process incoming inventory data, log stock returns, and synchronize multi-channel listings.
- **Web & Graphic Design Intern, Zazira Movers, Seremban, Negeri Sembilan, September 2022 – February 2023. (6 months)**
 - Designed posters for company's social media using canva.
 - Assisted with front-end website maintenance, routine troubleshooting, and structured text updates using WordPress and Wix.
 - Created content for company's TikTok and YouTube using Capcut and Adobe Premiere Pro.
 - Authored basic SEO-driven blog posts for the corporate site to capture and analyse organic consumer web engagement metrics.

Education

Bachelor of Computer Science (Hons.) Multimedia Computing, 2023–2025 , Universiti Teknologi Mara Kampus Jasin (UiTM).

CGPA:2.93

- Developed practical knowledge in multimedia application development, interactive systems, and user-centered digital experiences.

- Built technical foundations in software development, computer graphics, and mobile technologies through academic projects and collaborative coursework.
- Strengthened problem-solving, teamwork, and project coordination skills through project-based learning.

Relevant coursework: Game Programming, Virtual Reality, Computer Graphics, Mobile Programming

Diploma in Computer Science, 2020–2023, Universiti Teknologi Mara Kampus Jasin (UiTM).

CGPA: 3.44

- Built a strong foundation in programming, software design, and multimedia application development.
- Gained hands-on experience in object-oriented programming, interactive media, and information system development.
- Applied analytical thinking and structured development practices through practical coursework and team-based projects.

Relevant coursework: Object Oriented Programming, Interactive Multimedia, Information System Development

Project Involved / Completed

Final Year Project

VR Fitness Trainer: Enhancing the Effectiveness of Physical Exercise Using

Virtual Reality Technology, 2024 - 2025.

- Designed and developed a desktop-based, non-immersive VR application to provide accessible, guided fitness training and ensure proper exercise form, reducing the risk of injury.
- Utilized Agile Development methodology to manage iterative design, user-centric feature implementation, and continuous testing throughout the project lifecycle.
- Developed a library of guided exercises, including jumping jacks, sit-ups, push-ups, and air squats.
- Implemented a virtual trainer (NPC) system that provides step-by-step animated demonstrations, voice guidance, and instructional boards.
- Programmed system logic scripts, main menus, and user guidance mechanics utilizing C#.
- Achieved a 94% overall effectiveness rating based on participant evaluations, demonstrating high user satisfaction and improved confidence in performing exercises.

Social Good Volunteer App

Mobile Programming Group Project, February 2025.

- Coordinated with a team of 3 to developed a full-stack mobile app to connect volunteers with local community events using Android Studio.
- Coordinated with a team of 3 to create the backend database using SQL-based structures to handle user authentication, event management, and participation analytics.
- Improved user engagement by designing a recognition system that tracks volunteer hours and impact.
- Implemented role-based access control (User vs. Admin) for secure event management and reporting.

Streaming Platform Preferences

Big Data and Machine Learning Group Project, July 2024

- Collected and analysed dataset from UiTM students using structured questionnaires (Google Forms).
- Coordinated with a team of 3 to execute data preprocessing, cleaning, and feature transformation on raw datasets using Python to prepare data for algorithmic modelling.
- Built a K-Nearest Neighbors (KNN) classification model to predict user platform preference.
- Achieved 68% prediction accuracy on test data.
- Visualized insights using charts (histogram, heatmap, scatter plot) to analyse user behaviour.

Activities and Involvement
