MUHAMMAD ZHARIF AZFAR BIN NORHASLI	2023189569		Programmer / Documenter

PREPARED FOR:
NOR AZIDA BT MOHAMED NOH

Problem Statements

1. Challenges in Sourcing Volunteer Opportunities

There is a genuine willingness to engage in community activities, but many lack the means of locating appropriate volunteer opportunities. Event listings can take forms in social media, organizational websites, word-of-mouth and thus leads to volunteers wasting time and spending effort to find the one event they are interested in. Without a centralized and easy to use platform, people who want to volunteer might miss out on fruitful opportunities to serve their community, decreasing community participation.

2. Mismatch Between Volunteers and Events

Volunteers often have needs, skills, interests, and availability that don't always match the opportunities that you present to them. Without adequate filtering and categorization of events, volunteers are mismatched to events, volunteering for activities less than conducive to their capabilities or value statements. Effectiveness and efficacy and even passion to some extent can get lost at some point leading to disengagement and disengagement can have further consequences which is also a loss of an opportunity to harness the potential of the most valuable resource in the organization. To facilitate volunteers identifying the best events that align with their expertise and passion, a more tailored approach is required.

Objectives

1. To devise a centralized platform for volunteering opportunities

The problem thus far is that volunteer listings can be all over the place with multiple websites, social media posts and mouths to feed. This leaves many volunteers wondering what they can do next to help a relevant social cause. This project seeks to bring together all volunteer events, organizing them into one straightforward and easily accessible mobile application. This allows volunteers

to browse opportunities, filter them according to preferences, and sign up for events without much friction. By centralizing community service information, it will improve accessibility, thereby encouraging individuals to get involved in service.

2. To improve engagement of volunteers via tracking and recognition

Shortcomings of these interventions in general are related to lack of recognition, and acknowledgement, and motivation for engagement. There are numerous events but no good way for volunteers to keep track of their contributions and many volunteers contribute to more than 1 events. A tracking system included in the app, which will log volunteer hours, record past events, and give a summary of their impact. This is complemented by the fact that volunteers shall earn badges, certificates, or points for getting completed events; hence further participation can be encouraged. The app will encourage volunteer engagement while cultivating a sense of achievement by gamifying the process and implementing rewards and recognition.

3. To enhance the process of connecting volunteers and opportunities

Volunteers come with different skills, interests and schedules, so a one-size-fits-all approach does not translate to their engagement. The app will feature a smart recommendation system so that every volunteer can pick an event based on their profile, previously taken services or experiences. This further allows volunteers the ability to be better matched with opportunities that closely align with their skills and interests, enabling them to have a more gratifying, impactful volunteer experience. This will lead to improved satisfaction among volunteers and higher rates of participation by cutting the mismatches.
